SecuScan Security Report

Executive Summary

Task ID	Tool	Target	Status
test-tas	Nmap	127.0.0.1	completed

Findings by Severity

CRITICAL:	1
HIGH:	2
MEDIUM:	5
LOW:	10
INFO:	20

Key Observations

- Found multiple open ports on the target.
- Potential vulnerability in SSH version.
- Information disclosure via HTTP headers.

Detailed Findings

CRITICAL Finding #1: Remote Code Execution (RCE)

Description:

A critical vulnerability allowing remote code execution was found on port 8080.

Remediation:

Update the service to the latest version and restrict access via firewall.

HIGH Finding #2: Weak SSH Key Exchange

Description:

The SSH service supports weak key exchange algorithms.

Remediation:

Disable weak KEX algorithms in sshd_config.

SecuScan Security Report

MEDIUM

Finding #3: X-Frame-Options Header Missing

Description:

The web server does not set the X-Frame-Options header, making it vulnerable to clickjacking.

Remediation:

Configure the web server to send X-Frame-Options: SAMEORIGIN.
